

# AVIFORM

30 YEARS ANIMAL HEALTH EXPERTISE

Thank you for requesting a sample of Suppleaze Gold.

Below is information that we hope you will find helpful in evaluating this product.

Suppleaze Gold has higher Glucosamine HCL and identical Chondroitin levels per 10g to a brand favoured by many veterinary surgeons, but at an affordable cost.

And that product does not provide MSM or HA.

PER 10g	SUPPLEAZE GOLD	SYNOQUIN
CHONDROITIN SULPHATE	2,000mg	2,000mg
GLUCOSAMINE HCL	5,500mg	5,000mg
MSM (Methylsulfonylmethane)	2,460mg	-----
HA (Hyaluronic Acid)	40mg	-----
<b>PRICE PER KG</b>	<b>£53.30*</b>	<b>£120.00**</b>

\* Based on 1.5kg pack. Further savings can be made from our 3 for 2 offers.

\*\* 1kg pack - the cheapest we could find searching on the internet.  
Many suppliers were more expensive.

As you can see Suppleaze Gold contains no fillers or bulkers, just the pure ingredients required, formulated using the latest equine research, offering optimum joint mobility for your horse.

**99.9% of customers are totally satisfied with Suppleaze Gold and intend to continue using it.**

## CAREFULLY COMPARE SPECIFICATIONS

- **Watch for low ratios of Chondroitin compared to Glucosamine.** The ideal ratio, based on the latest research, should be should be **1 part Chondroitin to 2 parts Glucosamine**. Suppleaze Gold matches this ratio.
- Many products have 1 part Chondroitin to 4 parts (or more) of Glucosamine. These low Chondroitin levels make the product much cheaper to produce, but severely compromises the efficacy.
- **Chondroitin from a non-marine source.** Cheaper animal sources are considered unsuitable for equine applications, yet are commonly used. **Suppleaze Gold only uses highest quality (at least 90% pure) marine chondroitin.**
- **The Glucosamine HCL used in Suppleaze Gold is at least 99% pure.** Many cheaper and some expensive products use the less pure and of course cheaper sulphate (often less than 80% purity).
- MSM – make sure the purest material (at least 99.95) is used.
- HA offered in Suppleaze Gold has a **Glucuronic Acid level of at least 44%** - which is the best available. Although HA is increasingly added to equine joint supplements, manufacturers don't declare the Glucuronic Acid level, as much lower purity material (less than 20%) is routinely used. If a low spec HA is used, twice the level would be needed for the same effect.

**Although many equine joint supplements claim to contain similar ingredients to Suppleaze Gold, very few, if any at all use the same quality and levels per dose, which why such great results are achieved.**

As horses age, they lose some of their ability to repair and regenerate connective tissue and cartilage. The result is sore, stiff joints, typical of the symptoms of arthritis.

Suppleaze Gold is manufactured from ingredients at the optimum ratio, which are key to the growth of healthy cartilage and the long-term maintenance of healthy, pain-free joints.

The effectiveness of the key ingredients in our formula have been proven through practical use by veterinarians and also in many scientific studies published over the last two decades.

Extensive scientific testing and clinical trials both in the United States and Europe have shown that maximum strength supplements such as Suppleaze Gold can help rebuild healthy cartilage and increase the comfort and natural joint health of all horses and ponies, including working horses and professional racehorses.
