Dear Aviform

My four year old Dutch Warmblood was diagnosed last year with Osteochondrosis of the hocks. He had his operation and was prescribed a very expensive joint supplement by our vet. I just couldn't afford to keep him on it.

After extensive research, I found that Suppleaze Gold had same ingredients, but for a third of the price!

He has now been on Suppleaze Gold for six months and his hocks are better than ever. He isn't stiff after work or in the mornings, and is at the start of a very promising eventing career.

Many thanks.
